Living or working in a well-designed building can change the way we think and feel; it inspires us, uplifts us, and brings us together in new ways.

Reliable and sustainable, plywood has been the backbone of many loved buildings and spaces across New Zealand for decades.

Shadowclad® provides architects and designers a reliable and sustainable product that complements great design and a myriad of aesthetic finishes.

shadowclad[®] ULTRA

Shadowclad[®] Ultra combines the look and versatility of traditional Shadowclad Natural panels with the time and cost saving benefits of a factory applied exterior grade performance coating suitable for use with most paint and film-forming stain systems.

Using a unique powder coating process on the panel face and edges means Shadowclad Ultra panels can be immediately top coated on site, eliminating (in most cases) the need for wet primers.

FLASHINGS RANGE

The purpose-designed Shadowclad flashings range complements and works together with Shadowclad plywood panels to form a primary line of defence against the elements.

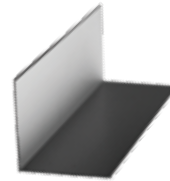

Shadowclad flashings are available in extruded aluminium; featuring either an 'Anodised' finish for immediate installation or a 'Mill' finish for powder coating, and folded stainless steel suitable for sea spray exposure zone (refer to the current Shadowclad Specification & Installation Guide for more information.)
