SHADOWCLAD® NATURAL TEXTURE GROOVE: CARLISLE HOMES

Shadowclad® Natural Texture Groove by Carter Holt Harvey® Woodproducts has been chosen for use in the façades of three new Carlisle Homes – The Jensen, The Pagoda and The Atlantique. Display homes can be inspected on location at Lyndhurst, Cranbourne, Tarneit and Caroline Springs.

Selected for its contemporary look, the lightweight nature of Shadowclad offers easy installation and cost effective construction. When compared with other lightweight construction methods, Shadowclad wins hands down, on more than just cost. Installation is completed by the carpenters – no bricklayers, no renderers.

Project home builders, Carlisle Homes' philosophy is to offer real choice to their Melbourne home buyers – real choice at an affordable price. And every building product used in the construction of each home follows the same philosophy.

Shadowclad is available in Natural or Prime finishes and in either textured or texture grooved profiles.

Shadowclad Prime features a pre primed, factory applied surface coating which allows labour and paint cost savings.

Primed improved top-coat application rates to 14 m² per litre. The Carlisle Homes' Design Team prefers the Groove profile. "It is an excellent way to change the appearance and texture of a home's façade." Shadowclad can also be installed with a proprietary flashing system, making building with the product even easier.

Available from your local timber merchant, Shadowclad is your versatile cladding solution. It can double as structural bracing, offers good thermal properties, can be used inside (untreated product only) or out (H3.1 LOSP treated) and requires no special tools to install.

Shadowclad is manufactured from sustainable plantation pine and is available Forest Stewardship Council® (FSC®) certified (FSC® C012019) upon request.
